Let Zafepass do the heavy lifting

... A UNIFIED PLATFORM, ENABLING GREATER FLEXIBILITY AND PRODUCTIVITY FOR BUSINESSES AND/OR MANAGED SERVICE PROVIDERS!

Zafepass takes secure connectivity to the next level— providing a global workforce with the ability to securely access assets, files, applications, servers and services from any device anywhere anytime. With built-in Attribute Based Access & Identity Control, End2End communication and file-storage encryption, fully controlled by IT, enhanced visibility applying granular

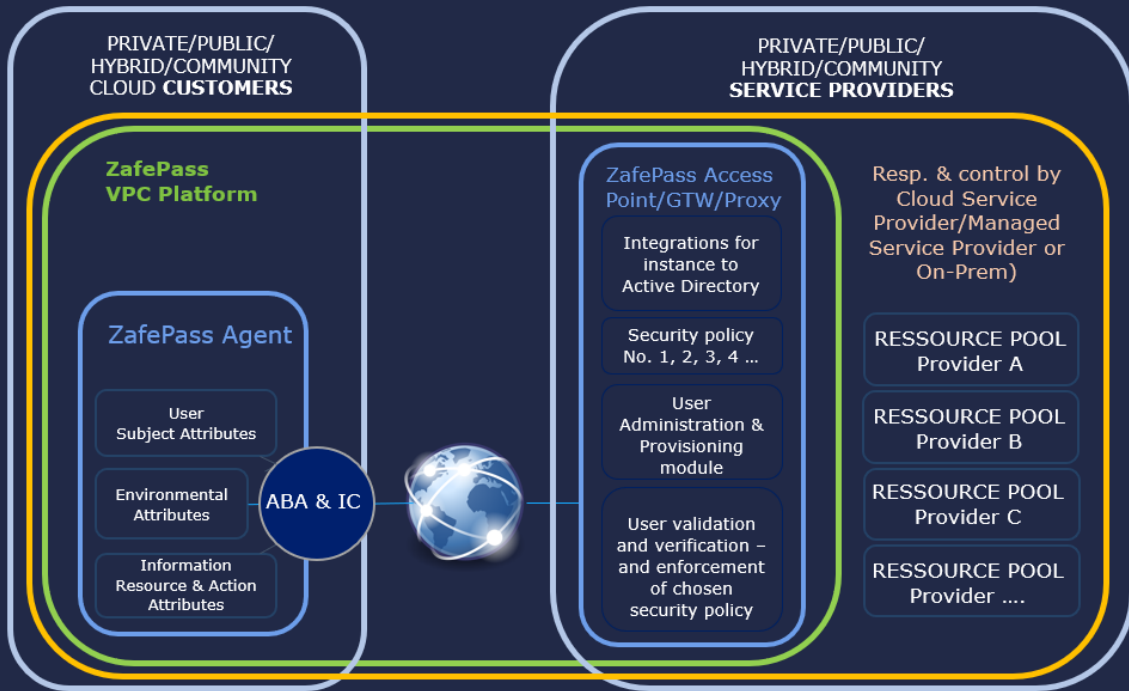

policy and real-time enforcement that help automate, efficiently and effectively using ITs scarce resources and time—all in contrast to the manually labor intensive current infrastructures and architectures. Zafepass is easy to deploy on-site or as a SaaS solution, supports easy resource and user on-/off-boarding, granular Zero-Trust based security and highly scalable.

“Legacy, perimeter-based security models are ineffective against attacks. Security and risk professionals must make security ubiquitous throughout the ecosystem.” (Forrester)

Zero-Trust Access Management

Attribute Based Access & Identity Control

A few hundred different attributes make it a daunting task for cyber-criminals to perform an account-take over. Should it happen, micro-segmentation will limit the damage to a single insignificant session.

Resources are provided to users based on least privilege, all managed via Zafepass' central 'Admin console' providing full control of every aspect of the environ-

ment. On- & off-boarding of users & resources are simple. One person can easily administer thousands of users, which means less resources are needed.

Zafepass offer functionality no single tool can match, and can be full operational in only a few hours. Zafepass is 'install-ware' on-prem or at service providers offering full 'IT-as-a-Service' including security.
